A product of Ramaply Group

rama doors

- Boiling Water Proof
- High Screw Holding Capacity
- Strong and Durable
- Super Smooth Surface
- Anti Warp
- Lockrail Provided
- Thick Cross band Veneer
- Computerised Klin Seasoned Wood

Installation and Storage Instructions

- Important to stack the doors horizontally on a flat, dry and plain solid surface on support (minimum 9 mm above the surface), away from direct sunlight.
- On all sides of the door, shutter and frame a 3mm space must be provided to accommodate minor movements of the door frames. Doors can be cut on all sides maximum up to ½ inch per side.
- Once cut, primer and paint must be applied immediately. Before fitting, the bottom of the door must be painted and hinges must be aligned. Always use four hinges of equal length at equal distance.
- Trimming must be done on both sides equally. For example; if 1 inch need to be reduced on the width, ½ inch must be reduced on both sides. Trimming must be done at the top if doors are made with lipping at the bottom.
- Minimum 6 mm thick external lipping of teak or hard wood on all four sides of door is highly recommended.
- Bathroom doors must be fitted with lipping at the bottom to prevent moisture absorption. Guarantee for bathroom door is void if lipping is not provided.
- Recommended to use fully threaded screws only for fixing strips, hooks or name plates.
